Thank you for purchasing **Space Graphics Planets**!

This pack is a collection of textures, materials, prefabs, and demo scenes. Each demo scene in this pack is constructed using features from **Space Graphics Toolkit**. If you need documentation for a specific feature then please read the full **GUIDE** in the main **Space Graphics Toolkit** folder.

For example:

Planets are made using the **SgtPlanet** component and the **SGT / Planet** material, which are part of the **Planet** feature.

The atmosphere is made using the **SgtAtmosphere** component, which is part of the **Atmosphere** feature.

The clouds are made using the **SgtCloudsphere** component, which is part of the **Cloudsphere** feature.

The sun/star is made using the **SgtBillboard** component, which is part of the **Billboard** feature.

The background is made using the **SGT / Backdrop** shader, which is part of the **Shared** feature.

NOTE: Planet pack only includes the features required to render the planets. If you want more Space Graphics Toolkit features then you must purchase the full Space Graphics Toolkit package.
